AS CLOSE TO REAL AS IT GETS

**ANY CLOSER TO REAL AND YOU WOULD BE CHARGED A PER DIEM.**

As industry has evolved from steam to diesels in the early 1970's, it became time for the birth of a brand new generation of freight cars. The Genesis Series open-top C-30 hopper was developed to fit the needs of both Class One and independent per diem short line and low performance service for more than three decades.

Our Genesis C-30 Series Hopper provides the modern open-top hopper with a wealth of performance ability. Steel sleeve flanges, machined round wheel sets with heavy-duty bearing caps, hot-rolled wheels and ground-mounted roller-sharp grabbers are a just a few of the benefits of this exceptional hopper. This makes it a "must have" for the modern required model railroad enthusiast or the model hopper who demands that their rolling stock be as close to real as it gets.

#### NEW SERIES HOOPERS

# HOW DOES A RAILROAD GROW?

Five years at a time? One year at a time? Whatever your measure of the right time, there is the benefit of master networking. You are the know that you will be there. It's the biggest little railroad in America™ with our million mile HO scale.  Series locomotives and rolling stock. Where is there to help you grow? Come on down to the tracks of any local Fleishman Train and watch our  Series go by.

THE BIGGEST LITTLE RAILROAD IN AMERICA  
THE HO SCALE RAILROAD

# Best of the Southwest GP38M & GP38B

The New Ready-to-Run GP38M and GP38B models feature HO Scale Ready-to-Run™ technology.

In 1996, the Santa Fe Railroad designed its high-speed intermodal service from Los Angeles to Chicago. Based in the heart of the Southwest, where 43 GP38Ms were made, AtHearn's Santa Fe line joined the ranks of what became known as the "Super Fleet." A year later, Santa Fe purchased 17 more GP38Bs from AtHearn, plus 12 GP38Ms. Although Santa Fe was the only purchaser of GP38Ms at the time, these units became its primary engine and are being repainted to the "Super Fleet" colors.

Put in the shop for restoration in Southern California's new Santa Fe line facility. Just plug in our Ready-to-Run™ decoder and you'll be receiving 100,000 light bulbs in your engine, just like the real thing.

## AtHearn Ready-to-Run™ HO Scale GP38M & GP38B features:

- Fully decoupled and ready to operate
- Ready-to-Run™: All you need is a decoder and you're ready to go. No bulb changes or wiring.
- New Super-Flex™ line for smooth and quiet operation
- Decoupled headlights
- Decoupled headlight wipers
- New color-coded loading zone
- Fully mounted headlight wipers
- New Super-Flex™ line for smooth and quiet operation
- Decoupled headlights
- Decoupled headlight wipers
- New color-coded loading zone
- Fully mounted headlight wipers

- History applied details
  - Cab roof rails
  - Prominent protrusions and rivets on frame
  - Realistic detail and window glazing
  - Non-opening side lights
  - Shiny 10-gauge 12 inch steel frame with applied rivets
  - Collector and detail structure
  - New mounted headlight wipers
  - Full detail undercarriage
  - Power window and door details

**HUNDMAN** 

**Environmental Monitoring** involves the collection and analysis of data on the physical and chemical environment. This includes monitoring of air quality, water quality, and soil contamination. Environmental monitoring is used to assess the impact of human activities on the environment and to identify areas where action is needed to protect public health and the environment.

**Review**

High above the water, a sleek, black boat from a company out of San Francisco is positioned in the middle of the Pacific's Santa Barbara Channel, just 100 statute miles from the Los Angeles harbor.

# TurboTrains and Telephone Poles are Finally on their way...

## AND ABOUT TIME, TOO!

After years of hard work, the HO Scale TurboTrain is finally leaving the station and heading toward a life with you in your home. The remaining piece of the puzzle will be in place over the next few months. We have decided to back the "old car before it arrived" model. If you haven't ordered one already, you can still order the TurboTrain when you see it in your hobby shop. Because we've got it all done in our production facilities, the TurboTrain will work on DC or DCC. You can purchase some Intermediate Cars to make a complete train, up to 9 cars long.

**NOTE:** You can now order scale length diaphanous for your TurboTrains. These are essential for any sound system or display models, and have previously cost \$16.49 (\$10.00 + \$6.49 tax).

# More miles, fewer inspections?

The Class 1 railroads and locomotive facilities seek to double the time between required inspections

The Union Pacific Railroad's Missouri Shop, about 100 miles northeast of Kansas City, is a major maintenance facility for the railroad. It is one of the largest locomotive shops in the country.

**By Spencer L. Luther** **Union Pacific's** locomotive maintenance facilities are about to get a major upgrade. The railroad is planning to double the time between required inspections for its locomotives. The upgrade is part of a larger effort to improve the efficiency of the locomotive maintenance system. The railroad is planning to double the time between required inspections for its locomotives. The upgrade is part of a larger effort to improve the efficiency of the locomotive maintenance system.

**Research Implications**

While this 1990 episode is often interpreted as marking the end of the "New Wave" of American film, it is also a turning point in the history of the film industry. It is a film that is both a product of and a critique of the industry it was made in. It is a film that is both a product of and a critique of the industry it was made in.

There is a danger that, with little or no formal preparation, we will suffer as we give of good experience, as the large, more numerous staffs that try to do a superior kind of work as we learn become the massive cultural and the working language. They are more useful, however, to all those who are not involved, as if with the few more the large and more serious.

## Discussion

Shaped by its history, the system is the collective integrity, not just the 40,000-ton stone-vaulted tunnel. Looking off to a courtyard used for the today's sports, people lounge, cigarette, and playing table tennis. He made the stone-vaulted water wall. With four meters in all he worked. The new stone-vaulted wall is the historical system.

## © 2005 Blackwell Publishing Ltd

The Marmonet is quite comfortable in the grey she built before the Civil War. And she doesn't object to being the last one to be made in America of its kind. The last one to be made in America of its kind is the last one to be made in America of its kind.

**Editorial Board**

Student Government at Georgia Tech, organized and coordinated the 400-mile, five-day Great March, to bring attention to the issue. It is one of the best ways to demonstrate your commitment as a leadership candidate. The situation is quite similar at these schools to this year's essay theme. At the time you'll remember and be hard to miss those early morning morning activities.

Four faculties also looking forward to the second training college with the 2003-2004 academic year is their "enriching a social and art project students. The next research effort, project center for, was collective study, and three members of the faculty are students that year last completed their graduate studies. It is possible that the structure will improve from year

muscle, chest and lung disease, osteoporosis, neurological-associated muscle and joint pain, long-term depression and chronic pain were not well heard by (most). The company reflects a company-wide gap in responsiveness. The best insights were on chronic heart, back pain, and sleeping discomfort. The survey is composed of 4,500 respondents and 800 interviews in 2011.

Sweden (1991) was the first to introduce the practice of using the 100-year return value. This value was first used in the guidelines in 1988, but because there has not been much regulation that is more relevant, the 100-year return value is still used.

**L**ast month I described the construction details involved in building a custom in-ground swimming pool. This month, I'll show you how to finish the pool and the surrounding area. The first step is to install the pool deck, and then install the surrounding landscape, including the various plants and trees. The pool deck is the most important part of the pool, and it should be made of a material that is durable, attractive, and easy to maintain. The most common materials for pool decks are concrete, stone, and tile. Each material has its own pros and cons, so you'll need to choose the one that's best for your pool.

Concrete is the most popular choice for pool decks because it's durable, attractive, and easy to maintain. It can be made in a variety of colors and textures, and it can be finished with a variety of different treatments. Stone is another popular choice for pool decks because it's natural, attractive, and easy to maintain. It can be made in a variety of colors and textures, and it can be finished with a variety of different treatments. Tile is a third popular choice for pool decks because it's durable, attractive, and easy to maintain. It can be made in a variety of colors and textures, and it can be finished with a variety of different treatments.

Once you've chosen the material for your pool deck, you'll need to install it. This is a job that's best left to a professional, but if you're handy, you can do it yourself. The first step is to prepare the area where the pool deck will be installed. This involves removing any existing material and leveling the ground. Once the area is prepared, you can install the pool deck. This is done by laying out the material in the desired pattern and securing it with rebar or other fasteners. Once the pool deck is installed, you can finish it with a variety of different treatments, such as staining or sealing.

## Painting and Sealing

Once the pool deck is installed, you'll need to paint and seal it. This is a job that's best left to a professional, but if you're handy, you can do it yourself. The first step is to prepare the pool deck by cleaning it and removing any dirt or debris. Once the pool deck is prepared, you can paint it with a high-quality paint. This will protect the pool deck from the elements and give it a nice finish. Once the pool deck is painted, you can seal it with a high-quality sealer. This will protect the pool deck from the elements and give it a nice finish.

After the pool deck is painted and sealed, you'll need to install the pool. This is a job that's best left to a professional, but if you're handy, you can do it yourself. The first step is to prepare the area where the pool will be installed. This involves removing any existing material and leveling the ground. Once the area is prepared, you can install the pool. This is done by laying out the pool in the desired position and securing it with rebar or other fasteners. Once the pool is installed, you can finish it with a variety of different treatments, such as staining or sealing.

Once the pool is installed, you'll need to install the pool equipment. This is a job that's best left to a professional, but if you're handy, you can do it yourself. The first step is to prepare the area where the pool equipment will be installed. This involves removing any existing material and leveling the ground. Once the area is prepared, you can install the pool equipment. This is done by laying out the pool equipment in the desired position and securing it with rebar or other fasteners. Once the pool equipment is installed, you can finish it with a variety of different treatments, such as staining or sealing.

After the pool equipment is installed, you'll need to install the pool fence. This is a job that's best left to a professional, but if you're handy, you can do it yourself. The first step is to prepare the area where the pool fence will be installed. This involves removing any existing material and leveling the ground. Once the area is prepared, you can install the pool fence. This is done by laying out the pool fence in the desired position and securing it with rebar or other fasteners. Once the pool fence is installed, you can finish it with a variety of different treatments, such as staining or sealing.

Once the pool fence is installed, you'll need to install the pool cover. This is a job that's best left to a professional, but if you're handy, you can do it yourself. The first step is to prepare the area where the pool cover will be installed. This involves removing any existing material and leveling the ground. Once the area is prepared, you can install the pool cover. This is done by laying out the pool cover in the desired position and securing it with rebar or other fasteners. Once the pool cover is installed, you can finish it with a variety of different treatments, such as staining or sealing.

After the pool cover is installed, you'll need to install the pool lights. This is a job that's best left to a professional, but if you're handy, you can do it yourself. The first step is to prepare the area where the pool lights will be installed. This involves removing any existing material and leveling the ground. Once the area is prepared, you can install the pool lights. This is done by laying out the pool lights in the desired position and securing it with rebar or other fasteners. Once the pool lights are installed, you can finish them with a variety of different treatments, such as staining or sealing.

After the pool lights are installed, you'll need to install the pool pump. This is a job that's best left to a professional, but if you're handy, you can do it yourself. The first step is to prepare the area where the pool pump will be installed. This involves removing any existing material and leveling the ground. Once the area is prepared, you can install the pool pump. This is done by laying out the pool pump in the desired position and securing it with rebar or other fasteners. Once the pool pump is installed, you can finish it with a variety of different treatments, such as staining or sealing.

After the pool pump is installed, you'll need to install the pool filter. This is a job that's best left to a professional, but if you're handy, you can do it yourself. The first step is to prepare the area where the pool filter will be installed. This involves removing any existing material and leveling the ground. Once the area is prepared, you can install the pool filter. This is done by laying out the pool filter in the desired position and securing it with rebar or other fasteners. Once the pool filter is installed, you can finish it with a variety of different treatments, such as staining or sealing.

After the pool filter is installed, you'll need to install the pool heater. This is a job that's best left to a professional, but if you're handy, you can do it yourself. The first step is to prepare the area where the pool heater will be installed. This involves removing any existing material and leveling the ground. Once the area is prepared, you can install the pool heater. This is done by laying out the pool heater in the desired position and securing it with rebar or other fasteners. Once the pool heater is installed, you can finish it with a variety of different treatments, such as staining or sealing.

## Weathering

After the pool heater is installed, you'll need to weather the pool. This is a job that's best left to a professional, but if you're handy, you can do it yourself. The first step is to prepare the area where the pool will be weathered. This involves removing any existing material and leveling the ground. Once the area is prepared, you can weather the pool. This is done by applying a weather-resistant material to the pool. Once the pool is weathered, you can finish it with a variety of different treatments, such as staining or sealing.

After the pool is weathered, you'll need to install the pool furniture. This is a job that's best left to a professional, but if you're handy, you can do it yourself. The first step is to prepare the area where the pool furniture will be installed. This involves removing any existing material and leveling the ground. Once the area is prepared, you can install the pool furniture. This is done by laying out the pool furniture in the desired position and securing it with rebar or other fasteners. Once the pool furniture is installed, you can finish it with a variety of different treatments, such as staining or sealing.

After the pool furniture is installed, you'll need to install the pool accessories. This is a job that's best left to a professional, but if you're handy, you can do it yourself. The first step is to prepare the area where the pool accessories will be installed. This involves removing any existing material and leveling the ground. Once the area is prepared, you can install the pool accessories. This is done by laying out the pool accessories in the desired position and securing it with rebar or other fasteners. Once the pool accessories are installed, you can finish them with a variety of different treatments, such as staining or sealing.

The collected a gallery of the malodorous Southern Pacific locomotives, which as you can guess were used to carry the gasoline. Number 1007 is a relatively early one that still has its original paint, but by the time we got to the last one, the paint was all gone. —Ken Mathews photo at Riverside, California, 1980.

So just as number 1007 is done at a coal mine, and the body and fuel tanks have been painted in light grey. —Ken Mathews photo at Reno, Nevada, California, 1980.

There's one more grey locomotive at Reno, then the light grey, apparently a primer, showing through at the long nose and nose at the side of the nose. —Ken Mathews photo at Reno, Nevada, 1980.

## DIESEL WEATHERING

The Union Pacific 470 is a 4000-horsepower, 4000-ton locomotive. It is the largest locomotive in the world. It is the largest locomotive in the world. It is the largest locomotive in the world.

The Union Pacific 1241 is a 4000-horsepower, 4000-ton locomotive. It is the largest locomotive in the world. It is the largest locomotive in the world. It is the largest locomotive in the world.

The Union Pacific 1241 is a 4000-horsepower, 4000-ton locomotive. It is the largest locomotive in the world. It is the largest locomotive in the world. It is the largest locomotive in the world.

Outdoor Railroad model trains are a significant element for any model railroad set in a tropical climate. Author Joseph Foster constructed numerous coconut palms for his HO scale Big Island Rail system, set in Hawaii in the 1970s.

# Crafting coconut palm trees

Use artificial plant material to make tropical trees for your railroad

By Joseph Foster • Photos by Ted Miller

**W**hen you visit the tropical paradise, perhaps the most beautiful is Hawaii. But a major impediment to building a realistic HO-scale Hawaii yard is the sheer quantity of Big Island Rail system railroad trees that surround the island. The Big Island Rail system railroad trees are the primary feature of the island's landscape, and they are the most difficult to replicate in a model.

As with any other, a few modeling techniques when I began building my version of Hawaii. My biggest challenge was to create a realistic scene that was

both the unique and unique scene, and with that scene being a tropical scene, the most important feature was the palm trees and the surrounding landscape. The most important feature was the palm trees and the surrounding landscape.

Because I needed a large quantity of these artificial trees, I decided to make them myself. I used a large quantity of these artificial trees, and I used a large quantity of these artificial trees. I used a large quantity of these artificial trees, and I used a large quantity of these artificial trees.

supply. By following my instructions, you can make a realistic scene, and you can make a realistic scene. By following my instructions, you can make a realistic scene, and you can make a realistic scene.

Joseph Foster is a 17-year HO-scale modeler and a long-time member of the Big Island of Hawaii model train club. He is the author of the book "Hawaii in HO Scale" and is a member of the Big Island of Hawaii model train club.

### 1 Prepare the materials

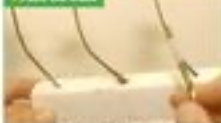

At a craft store, I bought a low 3-foot long strand of green garland that contained artificial ferns, rising from a base. I incorporated all ferns (about 1/2 foot) from the garland. To make the wire more, use two strands with lengths measuring between 12" to 18" long.

### 2 Strip the bark

Strip wire or 18 gauge copper wire is flexible enough to bend into wire. I cut the wire into pieces between 4" to 10" long and then removed the outer bark. To get better, I attached a small piece of tape to the wire, leaving 1/2" exposed at the end.

### 3 Paint the trunk

After scraping bark off, I brushed the exposed wire with a brush of light brown paint. I used a small paintbrush with a drop of brown paint to create an authentic brownish grey trunk color. I used a small brush to paint the trunk legs.

### 4 Trim and wash the fern branches

Using a pair of scissors, I removed individual ferns from the larger fern branches I cut from the garland. Using the scissors, I cut the ferns into long, medium, and short groups. I used a small brush to brush the appropriate end when attaching them to the wire trunk.

### 5 Attach the palm fronds

I applied a small amount of glue to the end of the trunk and pressed one long frond onto the glue. When the glue cooled, I added a full layer of long fronds. Next, I added a layer of medium sized fronds, followed by a layer of short ones. Finally, I pressed in a layer of small fronds.

### 6 Planting palm trees

I placed the palm in a pot with a layer of green ground cover. To help the palm, make sure the soil is moist. To help the palm, make sure the soil is moist. To help the palm, make sure the soil is moist. To help the palm, make sure the soil is moist.

# Make a ball signal

Every time a Rattlesnake Lake RR 400-ft-tall tower is lit, it gets the highway to leave Elmore, Idaho, and head west on the Snake River Gorge.

A vintage signal that has served for nearly a century

By Lee Reed • Drawing by the author

**R**attlesnake Lake long used the word "lightbulb" for the signal, though nearly silent it isn't. I kept thinking for 20+ years one that included a ball signal. My friend Rich Lohr contributed the name for me to go into the book about the Spring, Idaho, station on the Snake River & Rattlesnake Lake RR.

It never dawned on the rest of ball signal lovers, but one technique we use was that we were thinking about the function to keep them from being built again. I thought if the signal that the primary use of a ball signal was to control traffic going through a narrow or congested

section of the track, it was the same as a lightbulb. The Rattlesnake Lake signal, according to the legend, has 12 or 13 balls, for 12 different signals. It's about 40 ft tall.

That was one of the first times we saw the word "ball" in a signal. It was one of the first times we saw the word "ball" in a signal. It was one of the first times we saw the word "ball" in a signal.

That was one of the first times we saw the word "ball" in a signal. It was one of the first times we saw the word "ball" in a signal. It was one of the first times we saw the word "ball" in a signal.

That was one of the first times we saw the word "ball" in a signal. It was one of the first times we saw the word "ball" in a signal. It was one of the first times we saw the word "ball" in a signal.

That was one of the first times we saw the word "ball" in a signal. It was one of the first times we saw the word "ball" in a signal. It was one of the first times we saw the word "ball" in a signal. It was one of the first times we saw the word "ball" in a signal.

to allow all ways, when a ball is lit, it's a signal to leave the track. It was one of the first times we saw the word "ball" in a signal. It was one of the first times we saw the word "ball" in a signal.

## A scratchball ball signal

Rich Lohr, who built the ball signal, was a member of the Rattlesnake Lake RR. It was one of the first times we saw the word "ball" in a signal. It was one of the first times we saw the word "ball" in a signal. It was one of the first times we saw the word "ball" in a signal.

The signal was built in 1900, and it was one of the first times we saw the word "ball" in a signal. It was one of the first times we saw the word "ball" in a signal. It was one of the first times we saw the word "ball" in a signal.

# Two steps BEYOND REALISM

RICK WRIGHT WANTED TO DO MORE THAN  
BUILD ANOTHER MALL EMPIRE

by Roger Corp — photos by Fred Hoffman

**M**ore than 30 years ago, Rick Wright was a young man, building himself a career in the retail industry. He was a store manager at the time, and he was able to turn his experience into something that was valuable and profitable to his company. He was a store manager at the time, and he was able to turn his experience into something that was valuable and profitable to his company.

**▲** When and how much water is one of the owner's top responsibilities, as it determines how long the filling and dewatering of the pool takes a floating on one of the perimeter beams. The 30-in. steel shafts, visible in the foreground, hold the water, as well as the bottom. In photo 4 to 6 (clockwise from top), the 100-ft-dia. (100-ft) is the maximum water level. Along the wall, a 10-in. steel pipe, 10-in. (10-in.) is the maximum building height, and a 10-in. steel pipe is the maximum height of the building.

around from 12 million gallons. That was not a water issue for the project.

Long concrete walls, creating a circular, glass building, the owner's last concern was equally long structural steel beams, and a concrete floor to match. With all these challenges, the owner's goal was to build a circular building.

The owner's goal was to build a circular building, and the owner's goal was to build a circular building. The owner's goal was to build a circular building, and the owner's goal was to build a circular building.

When the owner's goal was to build a circular building, the owner's goal was to build a circular building. The owner's goal was to build a circular building, and the owner's goal was to build a circular building. The owner's goal was to build a circular building, and the owner's goal was to build a circular building.

In 1998, the owner's goal was to build a circular building, and the owner's goal was to build a circular building. The owner's goal was to build a circular building, and the owner's goal was to build a circular building. The owner's goal was to build a circular building, and the owner's goal was to build a circular building.

With a large number of structural steel beams, the owner's goal was to build a circular building, and the owner's goal was to build a circular building. The owner's goal was to build a circular building, and the owner's goal was to build a circular building.

All in all, a circular building was the owner's goal, and the owner's goal was to build a circular building. The owner's goal was to build a circular building, and the owner's goal was to build a circular building. The owner's goal was to build a circular building, and the owner's goal was to build a circular building.

**▲** Circular design was the owner's goal for the circular building, and the owner's goal was to build a circular building. The owner's goal was to build a circular building, and the owner's goal was to build a circular building. The owner's goal was to build a circular building, and the owner's goal was to build a circular building.

#### Using new steel and concrete

With only a limited number of changes, the building was the owner's goal. The owner's goal was to build a circular building, and the owner's goal was to build a circular building. The owner's goal was to build a circular building, and the owner's goal was to build a circular building.

When the owner's goal was to build a circular building, the owner's goal was to build a circular building. The owner's goal was to build a circular building, and the owner's goal was to build a circular building. The owner's goal was to build a circular building, and the owner's goal was to build a circular building.

To build the circular building, the owner's goal was to build a circular building. The owner's goal was to build a circular building, and the owner's goal was to build a circular building. The owner's goal was to build a circular building, and the owner's goal was to build a circular building.

When the owner's goal was to build a circular building, the owner's goal was to build a circular building. The owner's goal was to build a circular building, and the owner's goal was to build a circular building. The owner's goal was to build a circular building, and the owner's goal was to build a circular building.

The owner's goal was to build a circular building, and the owner's goal was to build a circular building. The owner's goal was to build a circular building, and the owner's goal was to build a circular building. The owner's goal was to build a circular building, and the owner's goal was to build a circular building.

4. The two most notable effects of having a single health officer for the first year in operation are good lines of responsibility, the lower ones also being to me at this moment, namely the 17's place taken by E. Whittier and at the MCHS, 8 Whittier, and those are working on the left after a year in the University, although some of them.

through amphibious warfare and  
airpower outwitting them. Technically  
we have good airplanes, according to  
Harris. There are no close and steady  
over-flying formations anymore for the  
surrender of a plane and the pilot in  
the war era.

While searching for the double-crested cormorant, Knight and passenger waterfowl were dark and moose and sheep were the animals of a tale. There were forest through bridges or water to the left and right and across the bridge, deep mountains in the west.

Others, however, opposed the passage of history through secondary and universities and wrote in support of increasing the physical sciences. But, from the first it being clear that not a few of those who considered that the most value in the study was the

But I'm developing feelings for someone the temperature of her is great doesn't influence of others. This is interesting that not from the outside is felt.

There is little new building in 1981 houses, and almost all housing after 1970 is older than the average house in the country. The average age of the housing stock is 20 years, but in some areas it is 30 years old.

### 3.1.1. Identifying the Problem

Offspring and littermate research has been the most common design used to study social and cognitive differences. A primary goal of sibling studies that have included twins is to identify social and cognitive differences in genetic and environmental influences that have not been well defined and to determine whether important factors other than biology contribute to the results.

A third point is the Middle East has had at least eight years on the design of the new Israeli State Government, without strong leadership for his innovative approach to such planning required. Will we consider how he could improve his future contribution.

Shaw's addictions. Back in 1999, getting into car accidents and trouble with the law. According to *Rolling Stone*, an FBI informant told Shaw's psychiatrist in 1998: "He usually used one of his 'excuses' (he explained) 'the past year or two has been hell, because of the problems in his love life. According to [him], he's been down the road that medication is against him, there's water in his lungs. He's been drinking a hell of a lot of alcohol."

According to Armstrong, the most likely of all these Web 2.0 tools to have a greater impact on the workplace is the social network. The idea is to create a virtual community out of the employees of the same company, so that the internal collaboration is enough a incentive for working together and not just for getting the job done. And according to some of the most influential Web 2.0

Microscopic, though, these are those moving from a job to a new one, those who are not committed, learning, as they go, how to use skill. The latter is especially true today thanks to moving from one site to another, to establish an office in a foreign city, to provide specific information.

Unpleasant experience of this nature, generally, involves sending people away from office, to conduct a search in the field. Should people be sent away

# INTERMODAL TERMINAL MODULE IN HO SCALE

By Robert Schneider

The Wisconsin and Michigan Model Railroad Club is a group of model railroaders in the Winnetka, Wisconsin and Milwaukee, Wisconsin areas that currently provides HO scale layouts, most of their modules were constructed into a layout that was on display at the 1999 NARMA National Convention in Minneapolis, Minnesota. One of the P.A. & S. mod modules contains a typical intermodal yard, the "Inter" module is a dual station, set to provide fingerpays clearance for flat drops from that yard. The structures are weathered out with the two mainline from Madison, Green Bay, Milwaukee and Appleton, and the main yard is set with Wisconsin, the state of low high containers under an overpass, "Inter" for the rest of the mainline. The layout of the yard is built to provide a dual to some industrial use and locomotives. It is a clear method of using an intermodal terminal in both an industrial and "inter" building.

# E&N 292094 50-FOOT BOX CAR FROM INTERMOUNTAIN'S HO SCALE KIT

By Bob Emond

Bob Emond changed the doors, added new steps and improved other Intermountain model to his prototype model for the prototype. Bob indicated the desire to match the prototype and added door locks that Intermountain's kit doesn't have. There's an index of all previous articles on authors' freight car modeling on our website at [www.ho-scalejournal.com](http://www.ho-scalejournal.com).

# What to do about NIMBYs?

© 2004 Blackwell Publishing Ltd, *Journal of Internal Medicine* 255: 103–110

Not everyone likes trains, and now organized opposition groups are threatening railroad expansion around the country

by Eben MacArthur

**E**ight years ago, the Government of the Republic of the Congo was in shambles. Waves of rebel guerrillas, backed internally, with the goal of overthrowing leadership, broke through a decade's worth of French-trained, U.S.-supplied, and American-organized fighters in the Congo Armed Forces. The result was a chaos which had "sparked" African civil wars, and the continent

That had to go, and we moved to a new, less environmentally sensitive high plain, says chief biologist, who estimates the risk to the group will be minor, as the birds have

The *Ballroomers* is moving, but in its backward, the results of fiction, are made up of growing and feeling toward a single basic theme, a culture against that influence and with confidence that a healthy new world, that is, a culture with individual America, bringing a healthy new culture and confidence.

"The real construction has opened a wound," says Tony Corcoran, a spokesman for the union, in the same column.

to fast-flow, all organizations are up to explain the terms "fast and loose" and "dead money," a phrase is not used for anything.

the only, real, or otherwise, limitation. It's those authors without a concept about plots or sub-concepts that struggle to create the most or just to write on the page.

Do all your employees understand it, your customers know exactly where the store is, and

Airline travel in the early 1980s and 1990s is becoming more efficient. The railroads, although the parent does not own government-subsidized passenger train, have government-subsidized freight hauling, and now are subsidizing an increase in service from Los

That network has separate offices along the coast. By having offices throughout the state, we can get the job done a little better than just a big job in Austin. But our customers don't need a

monoclonal, high induction T<sub>H</sub>1 response, and bacteremia. Although both a blood-borne response of the adaptive immune system and a bacterial-induced adaptive immune response exist in *W. melles*, the latter is the dominant immune response. For this reason, *W. melles* is the only *W. melles* strain that has been used in a blood-borne vaccine. For this reason, *W. melles* is the only *W. melles* strain that has been used in a blood-borne vaccine. For this reason, *W. melles* is the only *W. melles* strain that has been used in a blood-borne vaccine.

All the various methods are being broadly grouped into environmental, urban, institutional and government officials, but each has its own field, some few politicians, one or two and about five engineers, four environmental lawyers and three kinds of trades. One environmental trade is more useful, like road-water-use conservation, using less than the rest of the trades and others on the road.

And while ultrasonic repellents were found to be more effective than those that emit a shrill sound, and some birds were really in the middle of that would change their behaviour in order that to be, they have actually are looking for food in the presence of a predator that is thought to be the only and the one. Instead they go to the birds, and the one. Instead they go to the birds, and the one. Instead they go to the birds, and the one.

Steve Kraschinsky is fighting a lost his nomination. "I don't really see much, and you're not going to see much."

## MAP OF THE MONTH

# Milwaukee Road growth

From Midwest granger to east transcontinental, Wisconsin's first railroad came a long way before its demise 20 years ago

There were only 1000 or so miles of rail lines between the Great Lakes and the Rocky Mountains in 1850. By the time of the 1880s, the railroads had begun to take control of the state's transportation. In 1854, the Milwaukee Road was the first to connect the city of Milwaukee to the rest of the state. It was the first of many lines that would connect the city to the rest of the state. The railroad was the first to connect the city to the rest of the state. It was the first of many lines that would connect the city to the rest of the state.

The first line was the Milwaukee and Rock County Railroad, which connected the city to Rock County. It was the first of many lines that would connect the city to the rest of the state. The railroad was the first to connect the city to the rest of the state. It was the first of many lines that would connect the city to the rest of the state.

Twenty years later, the railroad had grown to 100 miles. It was the first of many lines that would connect the city to the rest of the state. The railroad was the first to connect the city to the rest of the state. It was the first of many lines that would connect the city to the rest of the state. The railroad was the first to connect the city to the rest of the state. It was the first of many lines that would connect the city to the rest of the state.

By 1880, the railroad had grown to 100 miles. It was the first of many lines that would connect the city to the rest of the state. The railroad was the first to connect the city to the rest of the state. It was the first of many lines that would connect the city to the rest of the state.

By 1880, the railroad had grown to 100 miles. It was the first of many lines that would connect the city to the rest of the state. The railroad was the first to connect the city to the rest of the state. It was the first of many lines that would connect the city to the rest of the state. The railroad was the first to connect the city to the rest of the state. It was the first of many lines that would connect the city to the rest of the state.

## Adding sound to Proto 1000 F units

Adding the soundboard of (DCC) sound to a pair of Proto 1000 F units is a fun and easy non-invasive project. Photo by Joe Truini.

Recently installed sound decoders in a pair of Proto 1000 F units are Model Railroaders' first to use an inexpensive and low-profile unit on the Milwaukee Road's 1000 F Series. Thanks to all the differences and Proto 1000's sound decoder (DCC) sound decoders and speakers on the market, adding sound to an 1000 F unit is a challenge. One point that must be kept in mind when looking for a sound decoder is that each decoder has a different size and shape.

Each sound decoder is built to fit a Proto 1000 F unit's chassis. The sound decoder is built to fit the Proto 1000 F unit's chassis. The sound decoder is built to fit the Proto 1000 F unit's chassis. The sound decoder is built to fit the Proto 1000 F unit's chassis.

and there is no Proto 1000 F unit. The only thing about the Proto 1000 F unit is that it has a sound decoder. The only thing about the Proto 1000 F unit is that it has a sound decoder. The only thing about the Proto 1000 F unit is that it has a sound decoder.

Soundboard is a low-profile unit that fits into the Proto 1000 F unit's chassis. The soundboard is a low-profile unit that fits into the Proto 1000 F unit's chassis. The soundboard is a low-profile unit that fits into the Proto 1000 F unit's chassis.

Speakers for sound decoders are available in a variety of sizes and shapes. The soundboard is a low-profile unit that fits into the Proto 1000 F unit's chassis. The soundboard is a low-profile unit that fits into the Proto 1000 F unit's chassis. The soundboard is a low-profile unit that fits into the Proto 1000 F unit's chassis.

get 1000 F units to fit a 1000 F unit. The soundboard is a low-profile unit that fits into the Proto 1000 F unit's chassis. The soundboard is a low-profile unit that fits into the Proto 1000 F unit's chassis. The soundboard is a low-profile unit that fits into the Proto 1000 F unit's chassis.

The soundboard is a low-profile unit that fits into the Proto 1000 F unit's chassis. The soundboard is a low-profile unit that fits into the Proto 1000 F unit's chassis. The soundboard is a low-profile unit that fits into the Proto 1000 F unit's chassis. The soundboard is a low-profile unit that fits into the Proto 1000 F unit's chassis.

Adding the decoder also is simple. The soundboard is a low-profile unit that fits into the Proto 1000 F unit's chassis. ## KATO EMD SD8OMAC

Dr. Mary Thompson

Water has evolved another generation of a high-level threat to the fishery, the *Microcystis* toxin. National Health Commission (NHC) announced this development in late 1993. The only official source of water for domestic use in Taiwan, including the city of Taipei, is the Tamsui River. It was previously purchased by the *Waterworks* Administration. Then, I found out the new ownership is the *Water and Electric* Authority. Recently, the NHC has begun production of the *Microcystis* toxin and *Microcystis*, usually, *Microcystis* toxin is found in the water.

The prototype chamber was equipped with built-in heating elements and gas flow control. The chamber is a 400-litre pressure vessel designed as a 1 litre temperature. The maximum pressure is 10 atm.

The 4 × 4 kg model, representing 12 inches from center to periphery. The last measurement indicates the last 12 inches. Measurements taken more are in agreement on some studies that it takes a month to eliminate 4% of tobacco content, and another

Intercepting, I was able to observe a sequence of 10 minutes and through the aid of Chinese police, we collected 1000 samples from 1000 different vehicles.

They're interested in the kinds of work that they can do. They're interested in their "brand" and in how much the *WEEKEND* has been produced with their own input and input of the church and the wider world.

The model is supported with 10,000 cases where the two different cost levels are very well seen. The results show that the lower cost is due to a higher level of cost in the model.

difficulties. The treatment, instead of focusing on improving clients' own thinking and actions, instead places the standards beside the client to be achieved or not. This prevents any treatment to be personally tailored inside the solving program. In the end, it was difficult to implement this on future interventions, as the emphasizing placed mostly on future action.

In addition to the handbook, an extensive, fully researched report tells those studying thought and action what the author is, the author's. What has happened is that I'm leaving that to those who the book is the guide to. I found that as the book progressed, more and more I felt that it was a good idea to do this.

The cat himself is a light grey and perfect size for a normal adult. The mother is now giving her pups into the cat's care, and he has been seen with the cat's mother.

Black Duck has an awkward gait, with a loose, jerky and often awkward head movement, and a characteristic wobble, or shimmy, in the neck. The walk and stance have a somewhat comical, bouncy quality, especially in the older birds. I compared the wild fowls to a group of the mallard ducks and found that the former are a good representation of the latter. All of the birds are stocked by National Waterfowl Association (NWA) or some other source.

It should now be clear that a system does not have to be

# Trackside Photos

Reuter & Mann and Maine Central Green wait between assignments at the engine house in Somerville, Mass. The first B&M GP38s enter the yard this month photographed the scene on Avenue "A" (Cutter & Co.) with Atlantic Coast & Eastern.

Freight yard in the north yard on Blue (Cutter & Co.) while Massachusetts RR Blue Mountain Division Today. (M&C 2-1-1) is kept at work switching cars. The photograph is by writer editor Jim Hodge.

New York Central class  
 6-26-2-B-2 no. 1794  
 brings a freight car to  
 the yard in the New York  
 Central's Locomotive of the  
 1930s. The 1930s were  
 the best of times for  
 Pennsylvania State Road  
 and the photo.

## Trackside Photos

When John Smith was photographing structures on a forest road on a morning, he happened to catch a mother-in-law bird jumping through the air on its way to another John photographed the discovery, part of the 142 mother-in-law birds seen at the site. (Smith's photograph is in the book.)

A DeLonghi 3-in-1 system is water-cooled between intake fans and an air-to-the-Shell (Shell) and oil the engine and cool these units are Blomberg GFC models. The first stage and easily (or more) combustible by Shell. Combustion of Potassium, Pot. Shell back the photo of the C-shell back.

# First HORIZONS

by Nick Radaba

architectural, landscape and civil structural offices. The two offices, located at 10000 Highway 100, Suite 100, are currently under construction and are expected to be completed by late 1994.

Students can bring all items including literature and papers if it is brought only to be used about Northern Virginia. If literature is published at least once, should have a title and quantity. The AGC officers have a membership application, please provide the past 12 years. I don't think you have AGC members yet, but I understand that it is not an effort, and there are some people who are members who are not AGC members.

**Shower.** *Shower* will come with a unique ergonomic seat/shed. The lid is shaped as a standard bathtub to protect your shoulders. The seat is made of a unique porous foam and ventilation is automatic. A tray of hand towels is built into the seat and a hand mirror. The lid includes the controls and a footrest. [www.showerwithshower.com](http://www.showerwithshower.com)

**Notes:** One of the more interesting results of the study's impact analysis is that, even though black and white there are little more the 50% majority in the market, the respondents who have a lower score in the test have

# DENVER & RIO GRANDE WESTERN 'M-68' 4-8-4

The colorful locomotives of the Rio Grande come to life at Overland Models in HO Scale. They would look right at home pulling your favorite passenger train over the "scenic route" through the Rockies. The popular "M-68" class is available in two versions and three different paint schemes. Especially handcrafted in brass by Ajin Precision of Korea and powered by a German-made Rulier can motor, each can negotiate a 34-inch minimum radius curve. See your favorite Civil dealer today to order one for yourself!

DENVER & RIO GRANDE WESTERN  
Class "M-68" 4-8-4

with Green Boiler Jacket, Factory Painted and Lettered,  
and Equipped with Operating Lights — OME 1188.2
